Declaration

I declare that this thesis is my own work and has not been submitted in any form for another degree or diploma at any university or other institute of tertiary education. Information derived from the published and unpublished work of others has been acknowledged in the text and a list of references is given.

Chapter 2

Literature Review

In this chapter I will demonstrate some of the extended citation capabilities provided by the `natbib` package (Daly; 1999). It replaces the standard L^AT_EX `\cite` command with two basic forms of citation command: `\citep` and `\citet`, as well as providing several other very useful ones.

The `\citep` command is best used when placing a citation at the end of sentence or phrase (as above). In the `natbib` documentation, this is referred to as a *parenthetical citation*.¹

When you want to refer to the authors of a particular work, typically at the start of a sentence, a parenthetical citation is not appropriate. This is particularly so if you are using a numerical or symbolic citation style. You should *not* start a sentence with

[2] says that this is most certainly ...

In such situations you really need to give the authors' names. The `\citet` command produces *textual citations*, which allows you to produce things like:

Ade (1983) describes a means by which textures may be characterized ... another approach is given in De Bonet and Viola (1998).

Atick et al. (1996) note that humans have little or no difficulty in perceiving shape, yet find it extremely difficult to *describe* what they perceive.

Note that an abbreviated version of the authors' names has been produced in the third example above. It is often desirable to have the full list of authors' names given when a work is first cited, and an abbreviated list thereafter. This can be achieved by passing the `longnamesfirst` option to `natbib` when the package is used. This will produce an initial citation like:

Atick, Griffin and Redlich (1996) note that humans have little or no difficulty in perceiving shape, yet find it extremely difficult to *describe* what they perceive.

Both the `\citep` and `\citet` can take two optional arguments. If just one is provided, its text will appear as a "post-note" after the citation details. If two arguments are provided, the first defines a pre-note, and the second a post-note. Here is an example:

¹For ease of conversion from existing L^AT_EX documents, you might find it useful to place `\renewcommand{\cite}{\citep}` in the preamble of the document, since any existing standard `\cite` commands should almost certainly be treated as `\citep`.

`\citep[Ch.~3]{AaK1989} ...` (Aarts and Korst; 1989, Ch. 3)

`\citep[see][Ch.~3]{AaK1989} ...` (see Aarts and Korst; 1989, Ch. 3)

These examples only scratch the surface of what the `natbib` package can do. To discover the full power of the package, see the documentation at CTAN (Daly; 1999). You probably already have it on your system. Try `locate natbib.dvi` at the command line.

Chapter 3

Figures and Tables

Here we will test that references to figures and tables work correctly.

3.1 Figures

Figure 3.1: An example of a figure.

See Figure 3.1.

3.2 Tables

See Table 3.1.

3.2.1 Referencing test

See Table 3.1 and Figure 3.1.

Appendix A

This appendix should get a letter

An appendix before the backmatter gets an automatically generated letter by which it can be referred to. This is Appendix A.

Appendix B

Simulation Source Code

You may want to investigate the `lgrind` program and package if you wish to include source code in your thesis

Vita

Publications arising from this thesis include:

Author, A. and Bloggs, J. (2002), A really catchy title. In *The 31st International Conference on Non-specific Computing*. Capital City, Country.

Bloggs, J. and Author, A. (2002), A very much longer and significantly less catchy title. in *Workshop on A Research Area*. Springfield, USA.

Permanent Address: School of Computer Science and Software Engineering
Monash University
Australia

This thesis was typeset with L^AT_EX 2_ε¹ by the author.

¹L^AT_EX 2_ε is an extension of L^AT_EX. L^AT_EX is a collection of macros for T_EX. T_EX is a trademark of the American Mathematical Society. The macros used in formatting this thesis were written by Glenn Maughan and modified by Dean Thompson and David Squire of Monash University.
